Question 1

Write a Python program that outputs the message `"Welcome to Computer Science!"` to the screen.

Question 2:

Write a program that prompts the user to enter their name, stores it in a variable called `student_name`, and prints a personalized greeting such as `"Hello, Alice!"`.

Question 3:

Write a program that asks the user to enter the width and height of a rectangle as whole numbers (integers). Calculate and display the total area using the formula:

$$area = width \times height$$

Question 4:

In computer science, finding remainders is a standard operation. Write a program that asks for an integer number of sweets and divides them equally between 4 children. Display both:

- How many whole sweets each child receives.
- How many leftover sweets remain.

Question 5:

Write a program that asks the user for their score out of 100. If the score is 50 or higher, the program should print `"Passed"`.

Question 6:

Write a program that prompts the user to enter an integer. Determine whether the number is **even** or **odd**, and print the result.

Question 7:

Write a program that asks the user for a secret password. If the input matches `"IGCSE2026"`, print `"Access Granted"`. Otherwise, print `"Access Denied"`.

Question 8:

Write a program that takes an exam percentage (0 to 100) from the user and outputs the corresponding letter grade using this scheme:

- 80 and above: `"A"`
- 60 to 79: `"B"`
- 40 to 59: `"C"`
- Below 40: `"U"`

Question 9:

A theme park ride allows riders who are at least 120 cm tall **and** at least 10 years old. Write a program that inputs height in centimeters and age in years. Output `"Allowed to ride"` if both conditions are met, otherwise output `"Not allowed to ride"`.

Question 10:

Write a validation program that first checks whether an entered temperature in Celsius is within a realistic ambient range (between -20°C and 50°C inclusive).

- If the temperature is **outside** this range, print `"Invalid temperature"`.
- If it is **inside** the range, check if the temperature is 30°C or above. If so, print `"Hot"`; otherwise, print `"Moderate or Cold"`.
